

Possible applications of the Kuepper build-in cabinet as corner element

Item-Number 12160

Why use the build-in cabinet as angle element?

Should you decide to place two of our workbenches at an angle of 90°, you can create one uniform working surface by using our wood connection element 12060. Thus you create an empty space under the connection element, which may be put into use with our build-in cabinet 12160.

What is this document for?

Different body widths of our workbenches result from the great variety in our range. To simplify the planning of your workshop we have decided to use standard wooden tops; this leads to different lateral overhang from worktop in relation to the body of the workbench. Certain workbench combinations cannot be used together with the angle element 12160.

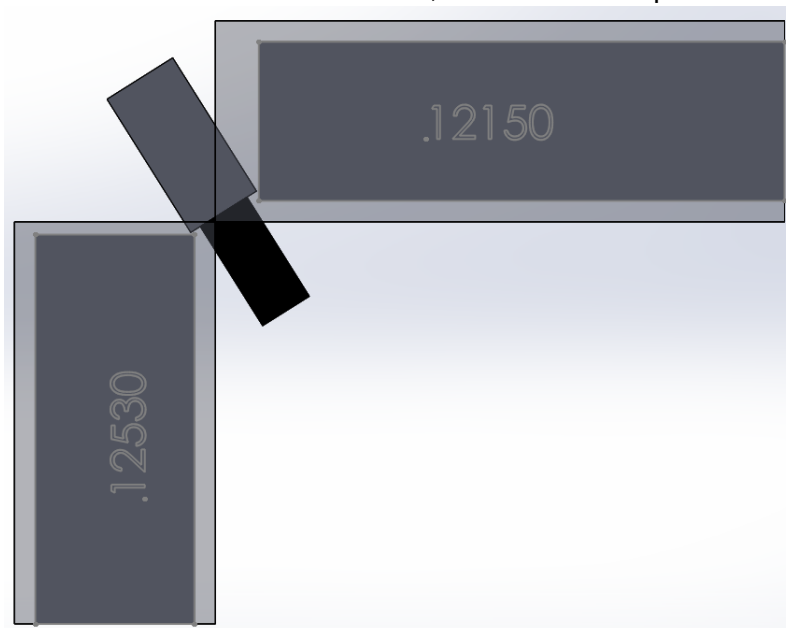

small overhang

large overhang

What needs to be taken into consideration?

In order to use the angle element 12160 it may be necessary to mount the worktop off-center in order to create enough space for the cabinet. The following diagram shows a combination of workbenches 12530 and 12150, where the worktops need to be flush-mounted.

When can the build-in cabinet be used as angle element ?

In the chart below you may find the workbench combinations with which the build-in cabinet can be used.
